

Location: City of Folsom, CA

Owner: City of Folsom

### Road Widening and Related Improvements

KASL prepared the preliminary design report, coordinated the environmental studies, performed land surveys and civil engineering design services, prepared the improvement plans and technical specifications, assisted the City of Folsom with bid documents and provided construction support and staking.

The scope of work included widening some 4,300 feet of 2-lane road to a 4-lane road with medians. Improvements included Class I bikeways, the modification of two signalized intersections, retaining walls, drainage improvements, signal interconnect, landscaped medians and soundwalls.

The project required coordination with the City of Folsom, FHWA, CalTrans, Placer County, the United States Bureau of Reclamation and the California State Parks and Recreation.
